

Master Of Cravetion React Native Users Experience Design

1. Introduction

- Give a brief introduction to your project and the list of features. Summarize in a few sentences what you proposed in the ideation report.

In my Master Of Cravetion app, I have **Sidebar** with title & **About, Menu, & Shop** link, & **Contact Us** with social link, our address, & our hours. Navbar is at the top. The title is on the left side & the app section link is on the right side. Next is the carousel with images of recipes. That is quite a bit of carousel option, & I will try my best to create one. Next is the About Card, Menu Cards, & Shop Cards. I think I can do, in my main component, with menu & shop cards &, when clicked on, will create another stack to show in more detail. The last is the Footer with Links to the top, Social, Our Address, & Our Hours. Footer will be the Bootstrap in Extra Small state, or vertical either then horizontal.

2. User Interface Design and Prototype

- Give some sample user interface layouts for your application. You can use either wireframe diagrams or prototyping tools to construct the mock representations of your UI design. Briefly explain the rationale behind designing your UI and how it is geared towards supporting the list of features for your application.

3. Navigation Structure

- Give a brief overview of the navigation structure for your application. Briefly indicate a typical flow of your application in terms of user experience. You can use any way of representing the flow. You can also construct a prototype using one of the prototyping tools to illustrate this.

I will answer the questions of 2 & 3 together.

Master Of Cravetion will have a sidebar with the title & logo on the top and four links, Menu, Store, About Us, and Contact Us. The Menu will show when any users visit my app. When clicked on the other links, the user will move to another page automatically.

In the Menu page, the user will see Menu image and title, and, when clicked on, will go to another page to see the description and price with a back button to go back to the Menu page.

In the Store page, it's exactly the same. The user will see T-shirt image and title, and, when clicked on, will go to another page to see the description and price with a back button to go back to the Store page.

The About Us is just text and the Contact Us is social link, Our Address, and Our Hours.
