

Project Title: Master of Craveation  
by John Chavez

1. Introduction

- 1.1. My website is only one page & it is a healthy organic vegan cafe featuring work of art using only edible plant foods.
- 1.2. When you first load my website, it will have a navbar with the title on the left & a icon. On the right is about, menu, shop, & contact. All of them are clicking links to different sections of the page & the contact will have links to the same links at the bottom. Right navbar will change into a hamburger small & extra small. Furthermore, a carousel with only a food image.
- 1.3. Scroll down will reveal the body area. This will have About, Menu & Shop are accordion cards &, went click, reveals text & multiple cards. Body Background image of a purple tiger.
- 1.4. About is just text.
- 1.5. Menu is text & Recipe card with picture, text recipe at the top & price at the bottom. Text recipe & price will be hidden only small & extra small.
- 1.6. Shop is a text & Merch card with picture, text merch at the top & price at the bottom. Text merch & price will be hidden only small & extra small.
- 1.7. Contact will have only one horizontal line, from left to right, Links, Social, Our Address & Our Hours. Small, Link & Social are the same horizontal line, & Our Address & Our Hours are on the next horizontal line above that. Extra small will have the same but just vertical rather than horizontal.

2. Design & Implementation

- 2.1. From the top, the navbar is good from the concept image. The hard part is all of the navbar text will have the same color, including the hamburger icon but, with a big help from Melanie, I got it to work.
- 2.2. Concept is one background image, but I like the carousel. I just need to adjust the image to the center & edit the images via gimp to become the same size.
- 2.3. Concept from About, Menu is just an image without text but I like the accordion cards for each body section. So the About is a div class container, row, col, id for the data-parent, card-header with a title button, & then collapse card. The problem is the styles. I have to try & try again before I like it.
- 2.4. Menu & Shop will have the same accordion card but with collapse child cards inside. I want each child card to have a space between each other child card, which will take you a long time to figure out. I like the card-header on the top, center, and the price on the bottom, center also, & the food image is a background image. The Shop will have a Buy button on the right side of the price text. A lot of time is just to figure out the right styles via .css.
- 2.5. Contact is pretty straightforward, just need some trial & error for each parent.

3. Conclusions

- 3.1. All in all, I like the way & the feel of my portfolio project website. I know a whole bunch because I watched a Responsive Bootstrap 4 Website from Start to Finish

video on Youtube for inspiration but I tweak the code rather than copy & paste.

- 3.2. I like to have a modal when you click on the Buy button for each Buy button, but time constraint.
